

WHAT IS CLAIMED IS:

1. An icemaker comprising an ice cube tray formed with cube compartments; an actuator rotating the ice cube tray; and a stopper coming into contact with the ice cube tray being rotated and allowing the ice cube tray to be twisted,

the cube compartments being diagonally arranged with respect to a lengthwise direction of the ice cube tray.

2. The icemaker according to claim 1, wherein the cube compartments are arranged at an angle of about 40° ~ 50° with respect to the lengthwise direction of the ice cube tray.

3. The icemaker according to claim 1, wherein each of the cube compartments has an oblong shape.

4. The icemaker according to claim 3, wherein the cube compartment has a crescent shape.

5. The icemaker according to claim 2, wherein each of the cube compartments has an oblong shape.

6. The icemaker according to claim 5, wherein the cube compartment has a crescent shape.

7. The icemaker according to claim 1, further comprising a supporting bracket supporting the actuator and the ice cube tray, wherein

the stopper is provided in one side of the supporting bracket.

8. The icemaker according to claim 7, wherein the ice

cube tray is formed with an ice-releasing portion at one side thereof to come into contact with the stopper.

9. The icemaker according to claim 2, further comprising a supporting bracket supporting the actuator and the ice cube tray, wherein

the stopper is provided in one side of the supporting bracket.

10. The icemaker according to claim 9, wherein the ice cube tray is formed with an ice-releasing portion at one side thereof to come into contact with the stopper.
